

第238回 物質循環談話会

2025年1月15日(水)13:00-14:30

13番教室（理学部C棟1階）

SPEAKER: Dr. Davaajav Dalkhsuren

(National University of Mongolia／Lecture)

TOPIC: Introduction of Mongolian ecosystem

Mongolian nature is often mixed with steppe, forming the forest-steppe ecosystem. Its distribution is determined by moisture conditions, and the establishment and growth of trees in the semi-arid regions is subject to drought stress. In this region, forest fires become a trigger for forest regeneration and indispensable disturbances that determine forest dynamics. In this time, I will introduce the Mongolian ecosystems and their research.

<キーワード>

モンゴル、乾燥、ステップ気候、森林、草原、火災、バイオ炭
